

Tuples + Sets

(Tuple)

- immutable list
- When the collection of data stays fixed
- Ex: 7 days of week
- Why use tuple?
 - more efficient in terms of Speed and Memory

Unpacking

x, y, z = 1, 2, 3

Unpacking tuple
into Variables

a = 1, 2, 3

Packing Values into tuple

x

{ set }

List ✓
Set ✓
Dictionary ✓

⇒ Set is collection of Unique Elements

⇒ Sets are Unordered ✓

↓
Python 3.7 insertion Ordered

⇒ Sets can store all immutables

⇒ Sets can't store mutables

Database

name	adhar	address
Q	1	1
b	2	1
Q	3	1
,	1	1

SET OPS

1) intersection

⇒ common Element in Set A and B

② Union

\Rightarrow Contains all Elements from both A and B

③ Difference

$A - B$

④ Symmetric Difference

A

B

Union (A, B) - inter (A, B)
